

# Specialized equipment and services. The power industry.

#### **First in Scaffolds**

Starting with the invention of the first steel scaffold in 1936, Safway's product base has evolved into a full range of customized scaffolding solutions.

Tight deadlines. Access challenges.  
We are prepared to handle the unique  
situations faced by the power industry.

#### **Experienced Labor and Services**

Pre-job conferences define support capabilities, execution plans and orientation procedures to help ensure smooth work flow.

Skilled and competent crews run by experienced superintendents are available for scaffold installation and removal 24 hours a day. Crews are locally based, enabling quick response to your emergency projects.

Safway Services representatives utilize AutoCAD® software to plan and adjust scaffold designs for your project. Daily and weekly progress reports help keep your project on time and on budget.

#### **Safety – Our #1 Objective**

Safway offers one of the most advanced training programs, designed to meet OSHA's Competent Person requirement. Our national team of dedicated safety professionals helps ensure safety comes first with behavior-based processes that consistently reinforce safety.

Our goal is to limit your exposure to risk through requiring ongoing training, safe work practices, and OSHA compliance.

**SAFWAY®**

**Fast Response For On-time,  
On-budget Completion**

Whether it's for a scheduled outage, emergency work or routine maintenance, count on Safway to get the job done.

Equipment needs are easily met by Safway's network of branch locations and regional distribution centers throughout North America. Ample inventory can be staged on site in forklift racks so it's ready when you are.

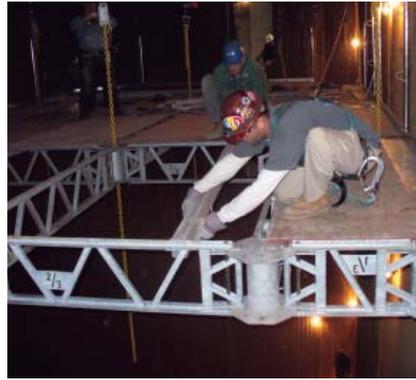

Our scaffold rental inventory software program has the power to track scaffolds, labor and usage and provide you with daily and weekly reports.

**Safway Scaffolding – Tailored To Fit  
Your Needs**

Conceived by Safway, our versatile, patented Systems™ Scaffold allows connection of horizontals 360° around the post. Fast Systems™ erection and dismantling can also help reduce your labor costs and reduce your worker's exposure to hazards.

Our QuikDeck™ Suspended Access System is specially designed to be built in difficult-to-access areas. For boilers, QuikDeck™ can be assembled in the air from an access hatch or configured on a level surface and then hoisted or lowered into position. Open, stable modular platforms provide ideal access for blasting and painting.

Safway electric hoists and modular staging systems fit through most boiler openings to help access areas for inspection, maintenance and repair. Use them in conjunction with Systems™ Scaffold.

**Customized Designs For Individual  
Applications**

With specialty equipment specifically designed for the power generation industry, Safway can meet your scaffolding needs. We have special designs to meet your individual needs for every size and type of boiler, or – for truly unique situations – we'll design it to your specifications.

Safway has a long history of providing the foremost engineering assistance with one of the largest staffs of professional engineers and designers to solve your complex scaffold problems.

A full range of services is available from application design and estimating to on-site consultation.

**Strength In Numbers**

Large projects require contractors that are capable of making sizeable commitments in labor and inventory. Safway has been making those commitments since 1936.

No matter your project size, we can commit to your schedule while supplying the most complete access solutions. With branches throughout the United States and Canada, Safway has the resources and personnel to create a solution suited to your project.
